The next meeting of the Oread Literary club will be held Thursday evening, March 23. Subject: Europe of Today. Progress of Scientific Discovery, Development in Manufacturing, Improvements in Means of Communication, Results of Industrial Revolution, War and Expan-

### Death of Henry Davis

Henry Davis, who died March 9 h of heart trouble, was born in Fietcher in 1833. He moved to Johnson with his parents, Baxter and Leata Davis, when quite a young man to the farm on which he continued to live until about two years ago, when he and his wife came to live with their youngest son, William, and in whose home he died. In 1858 he married Maria Stygles, who survives him, though in feeble health from the effects of a shock. He is also survived by three sons, Charles, Arthur and William, twelve grandchildren and one great grandchild. Mr. Davis was a good citizen, kind husband and an indulgent father. Relatives from out of town who attended the funeral Tuesday, March 14, were Edward Stygles and sister, Mrs. Flora kansom of Hyde Park, Henry Muckler of Morrisville; Mrs. James Ellsworth, Mr. and Mrs. Ernest Mudgett and Mr. and Mrs. Lamphere of North Hyde Park; Byron Davis of Fletcher and Byron Locke and son of Waterville.

Match at Morristown in the County of Lamolle and state of Vermont this 8th day of March, 191.

H. L. STEVENS, Deputy Sheriff.

### HOW TO PRUNE ROSES.

Different Systems to Produce Quality or Quantity of Blooms.

The pruning of roses is a trouble some matter to the amateur gardener. Different varieties require different treatment, but a few general rule may be laid down. The pruning of the dwarf growing hybrid perpetuals may be commenced in early spring.

If large masses of flowers are want ed four or five cames may be left two or three feet in length. This will give a large number of flowers not of the best quality. After blooming the canes should be cut back slightly so they will harden for the next senson's bloom

A better method produces quality rather than quantity. It consists in tion two pens of fowls were selected. cutting the canes to six or eight inches above the ground. The first year only three or four outside canes are allowed to remain, a few being added as the plant grows stronger. Roses grown in this manner require no stakes, as they are usually very vigorous.

Cold winters often injure the tops of the roses, while the roots are not burt. The canes should be cut just below the point of freezing, which is often close to the ground. Pruning early in the fall is not recommended.

How to Clean a Coat Collar. Often the collar of a coat begins to look shabby when the coat Itself is still quite fresh, and it is wonderful what a difference a thorough cleaning will make.

First of all take a piece of clean rag, dip it in spirits of turpentine and rub the collar thoroughly with it. Leave it for ten minutes, and then rub it again with the turpentine and scrape it carefully to remove any loose

Next sponge it with a little alcohol or chloroform and keep wiping it until it is almost dry. Hang it up in an alry place for an hour or two, and you will be delighted with the result.

How to Protect Plumbing. Paper, being a nonconductor of heat. makes the best possible cover for kitchen or laundry pipes that are apt to freeze. Wind around tightly, fastening into place with a string.

# Making Money On the Farm

XIII. - Poultry Parasites and Diseases

Author of "Home Course In Modern Agriculture" Copyright, 1909, by American Press Association

By C. V. GREGORY,

HE most discouraging thing about the poultry business is the great number of parasites and allments which affect the Unless special precautions are

taken the fowls are continually dying from one cause or another, and the profits shrink correspondingly. Most of these troubles are easily preventable if a little care is taken. One of the most important considerations is cleanliness. The house should be eleaned out frequently and sprinkled with quicklime or some disinfectant, time scattered about the yards also clos. The coops and smaller buildngs should be moved from place to lace frequently. Whitewash should e used liberally everywhere. One of e best kinds of whitewash is made cording to what is known as the vernment formula, as follows:

Slack half a bushel of lime in boilalt that has been dissolved in warm ater, three pounds of ground rice iled to a thin paste, one-half pound wdered Spanish whiting, one pound glue dissolved in warm water. Mix ese well and then let the mixture tand for several days. Heat before sing and apply hot.

Importance of Pure Water. One important means of keeping wis healthy and one that is often glected is giving them a constant apply of pure water. Because fowls not require water in as large quandes as other animals it is often ought that they can get along withut any except what they get in pudles in the barnyard. They will drink ach water if they can get no other. ut it is just as bad for their health is it would be for yours. This is a matter which is too often overlooked. ad poultry raising for profit becomes

apossible on that account. Water put out in open troughs soon ecomes warm and dirty, and if there hould happen to be a contagious disase in the flock it will be rapidly agreeable odor. The head swells, the pread through the water. A common eyes often being swollen entirely shut. he shady side of the poultry house is time and sometimes even get well, but ne of the best ways of supplying wa- it is seldom worth anything. The er. Strong Vitality Necessary.

Many of the diseases to which poulry is subject are due to inherited weakness. Experiments have proved that vitality and vigor are readily transmitted from parent to offspring. In an experiment at the Cornell sta-One had especially strong vitality, and

Keeping proved and the losses correspondingly decreased.

Contagious Diseases. tagious diseases, which often wipe out flock.

almost the entire flock. These discases, like contagious diseases of man, IT'S ALWAYS BAD are caused by bacteria or germs. These are tiny cells which gain entrance to the body and grow there. Death is not caused by the germs themselves, but by certain poisons which they give off. After germs goin entrance to the body they are difficult. to combat, since anything that will k!?? the germ will usually kill the fowl also. Germs cannot gain a foothold in a perfectly healthy bird; hence one of the best means of combating contagious diseases is by keeping the flock so healthy that they cannot get a start. Another important measure is the liberal use of disinfectants about the poultry houses and yards. Plenty of sunshine in the poultry house will help to keep it clean. Selling off the old stock before it becomes feeble and useless is a great help, since it is these old birds that are the first to

succumb to unfavorable conditions. One of the most serious of these contagious diseases is cholera. The common symptoms are great thirst, listlessness and yellowish or greenish droppings. Heroic measures are needed to stamp out this disease. All sick fowls should be killed and burned. The yards and houses should be thoroughly sprinkled with some disinfectant solution. A coal tar dip mixture is good, or carbolic acid may be used at the rate of one gallon to twenty gallons of water. The drinking water should be disinfected by adding one part of corrosive sublimate to every 2,000 parts of water. There is no way to cure the fowls after they once get the disease. All that can be hoped for is to save the well ones.

Probably the most common poultry water. Strain and add a peck of disease is roup. This is really a germ disease, but the germs cannot well get a foothold except under special conditions. These are found when the bird catches cold. The germs work mostly in the nasal passages, causing a cheesy secretion that has a very dis-

> The dust treatment is usually all that is required to keep the lice in check. Where they get unusually bad pyrethrum or tobacco dust blown in among the feathers is effective. This plan takes too long to be used extensively. however. Lice frequently make their way from the hen to the chicks at hatching time and often cause the death of many of them. The best way to prevent this, of course, is to see that the hens are free from lice before the chickens hatch. One of the best remedles is to dust the chicks with insect powder or paint them around the neck and under the wings with a sulphur and lard mixture. Mites are much worse pests than

lice. They live in the crevices in the walls and roosts, attacking the fowls at night. They do not eat the skin, but bore through it and sack the blood. Mites are so small that they can hardly be seen with the naked eye, but the damage they do is not measured by their size. Half the so called diseases to which poultry are subject are caused by mites. When fowls sicken and die without any apparent cause it pens was given the same kind of is time to look for mites. Painting the roosts and adjacent walls thoroughly with crude petroleum or kerosene will treatment should also be applied to coops and nest boxes. The litter under the roosts is often a breeding place of some coal tar dip. If the poultry house is fairly tight burning sulphur vermin and discuse in check requires considerable work and constant vigilance, but it is work that will be well Poultry is subject to a few con- repaid in the improved health of the

A bad back is always bad.

Bad at night when bedtime comes, Just as bad in the morning.

Ever try Doan's Kidney Pills for it ? Know they cure backache-cure every kidney ill?

If you don't, some Morrisville people do. Read a case of it:

Mrs. Henry Parker, Upper Main St., Morrisville, Vt., says: "I had a swelling of my lower limbs and other symptoms of kidney disease. There were intense pains in the small of my back, the kidney secretions were disordered and I had daily headaches. A friend told me of Doan's Kidney Pills and I procured a supply from A. L. Cheney's Drug Store. Relief was noticeable at once and after taking the contents of one box, I was able to rest welt. In view of my experience, I have great confidence in the

curative powers of Doan's Kidney Pills." For sale by all dealers. Price 50 cents. Foster-Milburn Co., New York, sole agents for the United States.

Remember the name-Doan's-and take no other.
